

GenData...

The New Definition of Mobile Communications™

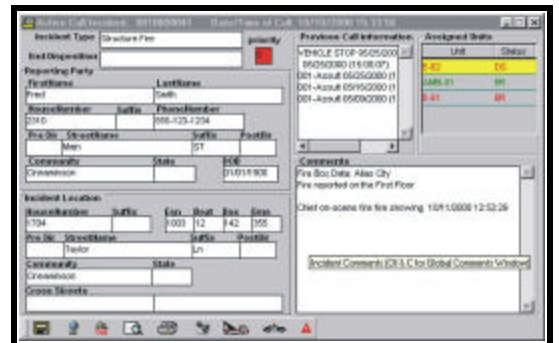

The Data You Need....When You Need It Most.

FEATURES:

- **GenData** virtually puts a CAD Workstation in the vehicle by displaying the same active call information as seen by the dispatcher.
- COMPLETE INTEGRATION of E911, CAD, Radio and Records creates the ultimate **TOTAL SYSTEM SOLUTION**.
- Utilizes latest technologies of IP Addressing and CDPD reliability.
- Text-to-Voice conversion automatically announces the incoming incident data to the officer, reducing the distraction of reading the screen for information.
- Full NENA II recommended data provides the officer with timely and accurate information.
- Queue listings of all active calls in progress throughout respective vehicle jurisdiction.
- Vehicle status listing of all departmental units.
- Vehicle Stop and State / NCIC Windows automate the lookup process, providing the officer with the protection of more timely data.
- Instant Messaging to/from all Users.
- Records Management System Interface.
- Automated Vehicle Location (AVL) Application.
- Choice of **OCI** or User provided hardware.

The **GenData Series** offers a new definition and provides a level of "Mobile Communications" previously unavailable on the market, for use with the Customer Choice of Hardware.

GenData's NENA II Active Call Window supplies the vehicle with all pertinent Incident Information seen by the Dispatchers themselves. The Data you need...When you need it most!
