

TDM-25

Digital Console Systems for Small to Midsize Comm Centers

The *TDM-25* communications dispatch console from **ORBACOM** provides the perfect-fit console in an economically priced package for small to midsize communications centers that demand the same digital features, reliability and power-packed performance as big city centers.

Proven, digital design offers greater system capabilities and improved audio over analog systems.

Desktop operator position electronics in a multi-tasking, Windows 2000™ environment allow access to multiple system resources.

Supports all radio systems and interfaces from leading industry manufacturers for maximum flexibility.

Built-in fault-tolerant and self-healing technologies prevent single failures from interrupting system operation. Redundant components are continuously tested, even in Standby mode, to ensure complete reliability.

TDM-25 console systems are easily maintained and updated with programming, administration and diagnostics handled locally and from a standard PC via dial-up connection.

Incorporating the same systems and software as our industry-leading TDM-Series, the *TDM-25* grows with you by offering a True Migration Path to the *TDM-150* or *OrbaNet* Series consoles.

TDM-25/1 Features:

- Desktop Console with 17" monitor
- Panel-Mount Microphone
- Wall-Mountable Central Package
- Single Central Controller
- Power Supply with 20-minute UPS
- Four Line Interface Controllers
